REPORT

Department of Zoology, St. Joseph's College (Autonomous) Irinjalakuda conducted a workshop on the topic, 'Measuring Ecological Footprints and Other Stories' on 29th October 2022 at 10 am in Marian Hall.

The programme began with prayer. It was followed by a welcome speech welcoming the dignitaries and the gathering. Then our HOD Dr. Gigi Poulse introduced the resource person Dr. Joyce Jose, Asst. Professor, Department of Zoology St. Thomas College (Autonomous), Thrissur. The resource person started the class by introducing what ecological footprint is. The ecological footprint measures how fast we consume resources and generate waste compared to how fast nature can absorb our waste and generate resources. It also measures biologically productive areas needed to provide for everything that people demand from nature. She also told me about carbon footprinting. The class was interesting as she set out demonstrative examples. She made us calculate our ecological footprints. And we were able to find out how many additional planets requires to support our lifestyle. All of us were shocked by the results. Then she shared alternatives to control the ecological footprints in our life. In the future ecological footprints will be very helpful for the management of waste, control of pollution, and development of a sustainable method to protect the earth's environment.

The session was followed by a discussion. The doubts asked by the students were cleared and she also shared information about the new species of insect they discovered. After a fruitful interactive session, a token of gratitude was given to the resource person. The seminar ended with a vote of thanks.

Attendance List

ST. JOSEPH'S COLLEGE(AUTONOMOUS), IRINJALAKUDA
